

Math 690-10.01 Questionnaire

1. Name:
2. Are you a graduate student, undergraduate student, postdoc, professor etc.? What year are you in your studies (if applicable)?
3. Do you have a thesis area, and if so, what is it? If you already need characteristic classes for your other work, please let me know, and tell me a little about it.
4. What related math courses have you taken or studied on your own?
5. What frequency of problem sets would be most beneficial to you? e.g. once every two weeks.
6. Would you benefit from having take-home midterm(s)? These would replace problem sets, but would be shorter, and you would not collaborate with your classmates on the solutions. How many midterms would you benefit from? Keep in mind that there is research suggesting that in some contexts, people learn more by taking a test than by studying.
