

xcurve

xcurve: Tom's parametric curve plotting program – let's you type in you own parametric curves and have the computer draw them and calculate their properties.

Running it:

1. From an ACPUB LINUX computer (Hudson, Teer, Soc-Psych, Carr labs): type `~witelski/xcurve`
2. On your own Linux/Unix/MAC machine: download the `xcurve.tar.gz` file, gunzip it, `tar -xvf` it, and then compile it with a C compiler (see the README file).
